Subject: Bat advice

[To:](#) [REDACTED]

Dear [REDACTED]

For interest and information, please find attached some data related to the advice I provided you on 25th June 2018.

I undertook a brief survey of the land in the vicinity of the garden to the rear of No 17 Frognaal around dusk. I used a hand-held 'manual' Griffin broadband detector, standing close to the rear boundary of the garden. I also positioned an Anabat SD1 static broadband detector in the branched of the elder facing towards the sycamore in the land adjacent to the western boundary of your garden. A pipistrelle (*Pipistrellus pipistrellus*, marked as *Ppi* on the spreadsheet) was observed flying and feeding in the vicinity. I attach a screenshot from the Anabat (\$6252201.jpg) and the Griffin (10X00021.jpg), the latter indicating a bat feeding.

I trust this is of interest.

I would be grateful if you provide me with your full address and postcode.

Kind regards

[REDACTED]
